

OS LAB-1

Q) Write a C program to do the following-

- Pass matrices as parameters
- Matrix addition and subtraction
- Sum of principal and non principal diagonal elements
- Sum of rows and columns
- Print transpose of given matrix
- check if symmetric or not

CODE

LAB-1 14/6/23

1) Write a C program to do the following:

- Pass matrix as parameter
- matrix add & subtraction
- sum of principal & non principal diagonal elements
- sum of rows & columns
- Print transpose of the given matrix
- check if the given matrix is symmetric

```
#include <stdio.h>

void sop (int n, int mat1[n][n])
{
    int sump = 0, sumnp = 0, i, j, k;
    for (i = 0; i < n; i++)
    {
        for (j = 0; j < n; j++)
        {
            if (j == i)
                sump += mat1[i][j];
        }
    }
    for (i = 0; i < n; i++)
    {
        for (j = 0; j < n; j++)
        {
            if (j != i)
                sumnp += mat1[i][n-1-i];
        }
    }
    printf("sum of principal diagonal is %d\n", sump);
    printf("sum of non principal diagonal is %d\n", sumnp);
}
```

```

int i, j;
int sum[n][n];
for (i = 0; i < n; i++) {
    for (j = 0; j < n; j++) {
        sum[i][j] = mat[i][j] + mat[i][j+1];
    }
}

for (i = 0; i < n; i++) {
    for (j = 0; j < n; j++) {
        printf("%d ", sum[i][j]);
    }
    printf("\n");
}

```

```
